

GCT REVEALS DESIGN CONCEPTS OF THE CR-SERIES

Wednesday, December 11, 2013

(Speedway, Indiana) – Global Caravan Technologies, Inc. (GCT) has announced today the release of artist's concepts for the CR-Series and upcoming launch of the CR-1 Carbon. The CR-1 Carbon RV is the world's first RV to feature extensive CFRP (carbon-fiber-reinforced polymer) technology, and is designed with global collaborations.

These artist's renderings paved the framework for CR-Series design and engineering programs in the early summer of 2013. GCT's technology partnerships have allowed much of the design to remain intact, including the concept for a 'flush' and integrated body.

GCT's CEO and Chief Product Architect Charles Hoefer notes that the CR-Series intentionally features a tall and 'slippery' exterior design, "We approached the development of the CR-Series with an absolute premium on interior space. We have really pushed the envelope in taking a new design to market, which features a modern exterior, yet brilliantly spacious interior."

The CR-Series achieves excellent aerodynamics through new technologies that reduce drag, lower exterior height, and lower center of gravity. Fuel economy is further aided by reductions in weight through GCT's RCM™ (Rapid Composites Manufacturing™) technology, giving the CR-Series a construction blueprint more akin to aircraft or supercars than conventional RVs.

GCT's first product launch, the CR-1 Carbon travel trailer, features an industry-first floorplan with tall ceilings and loads of new technology for luxury RVers, at an overall length of 35'3".

Harrison Ding, Chairman and President for GCT, comments that the CR-1 Carbon's design has been a truly global undertaking, "We are proud to say that we engaged designers from Asia to the heart of the US auto industry in Detroit. In the mix were luxury RV enthusiasts, who helped point us in the right direction regarding new features and content."

Important technology revisions have caused GCT to move the CR-1 Carbon unveiling to the first quarter of 2014. GCT plans to release further product details leading up to the launch. For the latest information, visit www.gctrv.com/unveil.

ABOUT GLOBAL CARAVAN TECHNOLOGIES, INC.

Global Caravan Technologies, Inc. (GCT) is a luxury RV and specialty vehicle innovator, committed to exceeding expectations of consumers in luxury markets worldwide, by focusing on design, innovation, and sustainability. GCT has established a research and development facility next to the Dallara IndyCar Factory in Speedway, Indiana to affirm its commitment to continuous innovation. For more information, visit www.gctrv.com/unveil, or email info@gctrv.com.
