

GCT PREVIEWS SUPER-LUXURY CARBON FIBER RV

Friday, March 7, 2014

(Speedway, Indiana) – Global Caravan Technologies, Inc. (GCT), a luxury RV and specialty vehicle innovator, previewed yesterday a first look at exteriors of its first CR-1 Carbon model.

The CR-1 Carbon becomes the world's first all-carbon fiber super-luxury RV designed for series production, utilizing technologies from multiple industries, including motorsports, automotive, IT, and aerospace. The CR-1 Carbon offers substantial benefits to consumers, including smart control functions, high fuel economy, high strength structures, and innovative luxury designs.

“Consumer-driven innovation is at the heart of GCT’s mission,” said Harrison Ding, Chairman and President of Global Caravan Technologies. “We built a transformative product through collaborations with world-class partners.”

The company, which boasts partners such as Dallara, the world’s largest race car builder, and Purdue University, has recruited a veteran team of former IndyCar champions, along with aerospace technicians to build its state-of-the-art products.

The CR-1 Carbon was revealed during a private gala at the Dallara IndyCar Factory in Speedway next to GCT’s R&D headquarters.

Guests of the event included Lt. Governor Sue Ellspermann, Dallara USA CEO Stefano dePonti, officials from Purdue University, Indiana economic development officials, board members of the American China Society of Indiana (ACSI), and business leaders from overseas and the US. "GCT brings transformation to an industry we Hoosiers are already proud of," said Lt. Governor Ellspermann. "We're very pleased to support this innovative company as it continues to grow."

GCT plans to release more images of the CR-1 Carbon on Saturday via the company's website. The virtual launch will include a new website for GCT, as the company aims to begin providing information to consumers regarding the CR-1 Carbon and other upcoming models.

GCT's CR-1 Carbon features an optional smart control platform, where nearly every electrical function of the unit can be monitored and controlled via iOS, Android, or PC operating systems. The platform allows for real-time system diagnostics and offsite control capabilities.

Backed in part by investment from China, GCT plans to market its products globally, making them available to markets in North America, China, Europe, and Australia.
